

Restaurant Sales Dashboard

Professional Power BI Project Report

1. Project Overview

This report presents an analysis of restaurant sales data using an interactive Power BI dashboard. The dashboard brings together sales, orders, quantities, products, payment methods, cities, order status, categories, and monthly sales trends in one view.

2. Key Performance Indicators

Metric	Dashboard Value
Total Sales	2M
Total Orders	500
Total Quantity	1.507K
Total Items	20

3. Product Performance

The Top 5 Items visual shows Cheese Pizza at approximately 204K, Chicken Pizza at 194K, BBQ Pizza at 192K, Chicken Karahi at 178K, and Pasta at 116K. These are the leading individual items shown in the dashboard.

4. Sales by Category

Pizza is the largest displayed category at approximately 591K in sales. Fast Food follows at 324K, BBQ at 316K, Burger at 243K, Desserts at 135K, and Drinks at 117K.

5. City-wise Sales

The dashboard compares five cities: Charsadda (487K), Peshawar (396K), Islamabad (325K), Mardan (299K), and Nowshera (221K).

6. Payment Method Analysis

The payment-method visual compares sales generated through Easypaisa, Card, Cash, and JazzCash. This view helps identify the contribution of different payment channels to overall sales.

7. Order Status Analysis

The dashboard contains 500 total orders: 450 completed, 26 cancelled, and 24 pending. These correspond to approximately 90%, 5.2%, and 4.8% of total orders respectively.

8. Monthly Sales Trend

The monthly line chart shows sales increasing from the start of the year and reaching its highest visible level around April at roughly 240K. Sales fluctuate through the following months, with a noticeable decline around September and a modest recovery afterward.

9. Dashboard Features

Feature	Purpose
KPI Cards	Quick summary of sales, orders, quantity and item count
Month Filters	Filter the dashboard by individual month
Bar Charts	Compare products, categories and cities
Donut Charts	Analyze payment methods and order status
Line Chart	Track monthly sales trends

10. Key Findings

- Total dashboard sales are approximately 2M across 500 orders.
- Cheese Pizza is the highest-selling individual item shown in the Top 5 visual.
- Pizza is the highest-sales category shown in the category comparison.
- Charsadda has the highest city-wise sales value among the displayed cities.
- Most orders are completed, with 450 of 500 orders shown as completed.
- The monthly trend reaches its highest visible level around April.

11. Tools Used

Power BI was used for dashboard creation, data visualization, KPI reporting, filtering, and trend analysis.

12. Conclusion

The Restaurant Sales Dashboard provides a consolidated view of sales performance across products, categories, cities, payment methods, order statuses, and months. The project demonstrates practical skills in dashboard design, data visualization, KPI reporting, and business-oriented data analysis.
